### Abstract

**Purpose:** In this Research, we aim to evaluate the effect of cultural activities of public librarians on promoting the circulation rate of Goharshad middle school library.

**Methodology:** This research implemented by quasi-experimental method using One-group pre-test and post-test design. Two questionnaires are used as tool measuring book loan rate of students before and after cultural activities. We used 4 questions in pre-test and 8 questions in post-test. The population of this research included 86 students in three classes. To examine the hypotheses, we used Chi-Square and Paired Samples t test.

**Findings:** The results showed that respondents in pre-test stated that they book loan rate is Twice a month (mean score 38, 44.2 percent). After implementation of cultural programs for students, they stated that book loan rate of them increased around 3 time a month (mean score 45, 52.3 percent). Besides, we used one sample t test for measuring the significance of difference between mean scores in pre-test and post-test and we found that the difference is statistically significant. Likewise, second hypothesis of the research was statistically approved ( $P_{\text{value}}$  of Chi-Square test=0.006 <0.01).

**Originality/Value:** this research is original because of clearing the effect of cultural activities of public librarians that work in a public library around a school on circulation rate of school library and book loan measure of students that is a sign of increase in book reading behavior.

**Keywords:** Cultural Activities, circulation of library, The habit of reading, public libraries.
