Abstract

Purpose: This research aimed at performance appraisal of public librarians in Gilan province, using 360 degree feedback approach.

Method: The survey used a questionnaire devised for data collection in 4 formats, to assess librarians by 4 groups: superiors, colleagues, themselves, and library users. The research population was the community of all 80 public librarians in Gilan Province, north of Iran. From a pool of the available sources and documents, items were derived or created in accordance with views of some academics and experts who were selected as a Delphi Panel from a range of people known for their experience and/or expertise in library management.

Findings: In regard with Moral-Value Index, self-evaluations were significantly different from those of superiors, colleagues and library users. As far as the Process Index was concerned, there was a significant difference between the users’ viewpoints and other three groups. In relation to Performance Index, as well as the general appraisal, no significant difference was observed among the viewpoints of the four evaluating groups.

Originality/Value: This the first application of 360 degree feedback approaches in Iranian libraries.

Keywords: Librarians, 360 degree feedback, Performance evaluation, Performance Measurement, Public Libraries, Gilan province
